EDUCATION

- M.Tech - Computer Science and Technology | 2024 – 2026 | CGPA: 8.5
Andhra University College of Engineering , Visakhapatnam
- B.Tech - Computer Science and Business Systems | 2020 – 2024 | CGPA: 8.7
Vishnu Institute of Technology, Bhimavaram

WORK EXPERIENCE

Backend Developer Intern | Aditha Enterprises LLP, India

July 2025 – Present

- Built a scalable publishing engine using NestJS and TypeScript to orchestrate content distribution across 6+ social media platforms.
- Implemented high-concurrency scheduling with Redis and Bull for automated posting, background jobs, and retry mechanisms.
- Designed secure media uploads using Google Cloud Storage pre-signed URLs, enabling direct client uploads and reducing backend load.
- Integrated Google Gemini AI to auto-generate captions, hashtags, and engagement insights from user-uploaded images.

PROJECTS

Gibber Link – Supervisor-Driven Multi-Agent AI Boardroom System

- Developed a Supervisor-orchestrated multi-agent AI system using NestJS and Mastra AI where specialized agents debate, share context, invoke tools, and autonomously generate startup deliverables through execution pipelines powered by Ollama Cloud.
- **Technology Stack:** Node.js, NestJS, Mastra AI, Ollama Cloud, Multi-Agent Systems, Supervisor Orchestration, Context Memory,

Tourist Safety & Monitoring App (SmartTour)

- A real-time safety monitoring application that tracks tourists' locations against known high-risk zones using geofencing. It features an emergency response system that instantly visualizes SOS alerts (EFIRs) on an interactive map for responders and continues tracking location in the background even when the app is closed.
- **Technology Stack:** React Native (Expo), TypeScript, Firebase (Firestore, Realtime Database), Leaflet Maps (WebView).

Drushti – AI-Powered Mobile Eye Disease Detection App

- A mobile application designed for offline use on low-end Android devices to detect eye conditions like cataracts, diabetic retinopathy, and glaucoma. It features a multi-language voice interface and generates diagnostic PDF reports to assist non-specialists in rural areas.
 - **TECHNOLOGY STACK:** React Native , Python (Flask),DenseNet121, ResNet50 , PDF generation, FastAPI
-

TECHNICAL SKILLS

- **Languages** : TypeScript, JavaScript, Python, Java.
 - **Backend & Frameworks** : NestJS, Node.js, RESTful APIs, Mastra Ai.
 - **Data Science & Artificial Intelligence** : TensorFlow, Keras, Scikit-learn, Pandas, NumPy, Image Classification, Model Training & Evaluation.
 - **Cloud & Infrastructure** : Google CloudPlatform (GCS/Bucket Creation) Infrastructure.
 - **Databases & Tools** : Prisma ORM, Git, SQL.
-

HONORS & ACHIEVEMENTS

- **Winner, Corporate Hackathon Challenge**

Secured a competitive internship at Avani Organics by successfully proposing and prototyping a digital inventory solution that addressed critical business bottlenecks.

- **Technical Event Organizer, Techie Blazers (VITB):**

Orchestrated multiple technical events including "FunMath" and competitive coding challenges, managing logistics and engagement for 100+ participants.

- **Finalist, Build Bharat Through AI Hackathon:**

Developed "ProfitBin," an AI-powered waste classification system using TensorFlow to promote sustainability and the circular economy.
